

Physician Group Honor Roll

Methodology

HPHC uses a domain opportunity methodology which combines HEDIS measures for both adult and pediatric patients into three domains, as listed below:

Acute Care Domain

- Antidepressant Medication Management (Continuation Phase)
- Appropriate Testing for Pharyngitis (All Ages)
- Appropriate Treatment for Upper Respiratory Infection (All Ages)
- Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis (All Ages)
- Initiation & Engagement of Alcohol & Other Drug Dependence Treatment – Engagement
- Use of Imaging for Low Back Pain

Chronic Care Domain

- Asthma Medication Ratio: Medication Compliance, for at least 75% of treatment period
- Eye Exam for Patients with Diabetes
- Kidney Health Evaluation for Patients with Diabetes
- Statin Therapy for Patients with Cardiovascular Disease
- Statin Therapy for Patients with Diabetes

Preventive Care Domain

- Breast Cancer Screening
- Cervical Cancer Screening
- Child and Adolescent Well-Care Visits (Ages 3-21)
- Chlamydia Screening in Women (All Ages)
- Colorectal Cancer Screening
- Well-Child Visits in the First 30 Months of Life (Ages 0 to 15 Months)
- Well-Child Visits in the First 30 Months of Life (Ages 15 to 30 Months)

The evaluation of each domain compares actual physician group performance to national performance at the 75th and 90th percentiles. Physician groups earn points if their domain score is better than performance at the 75th percentile (1 point) or at the 90th percentile (2 points).

Physician groups that earn 4 or more points are named to the Honor Roll (the equivalent of performance at the national 75th percentile for 2 domains and the 90th for the third domain). Physician groups that perform at or above the national 90th percentile in all three domains is named to the Honor Roll with Distinction (as indicated by bold font).
